

We at suscoa are committed to sustainable consulting, quality assurance services and training programs.

suscoa's goal is to use our expertise in certification and supply chain management to support and promote organic farming and other initiatives aimed at increased sustainability.

As your partner we will support you in your responsibilities and in implementing your own quality demands.

Our customers include farmers, producer groups, processing companies and the trading sector as well as associations, interest groups, public institutions, certifiers and standard setters.

Our professional skills and long years of experience allow us to provide high quality solutions.

We provide consulting, quality assurance and training services

for

sustainability standards and certification

SUSCOA

sustainable consulting
for agribusiness

**Consulting services for all inspection and certification issues.
Quality assurance services.**

We can provide you with professional consulting services at any point of the certification process, from its initiation to its successful completion, irrespective of whether you work in the **farming, trading, production or processing sector**. We offer individual solutions in accordance with a variety of organic standards (EU regulation on organic farming, NOP, association guidelines, etc.) as well as the standards for good agricultural practice (GLOBALG.A.P., UTZ, etc.).

Our commitment extends beyond helping you to successfully gain certification. We can support and guide you through ongoing challenges, for example modifying operating procedures or implementing standard changes.

In addition, we are specialized in developing documentation instruments that facilitate meeting the respective guidelines.

We also offer you the option of outsourcing parts of your quality management (QM) system to us.

Quality assurance by sustainable standards, monitoring and traceability systems.

We work hand in hand with **public institutions, standard setters and companies** to help them develop their envisioned quality standards and individual quality management systems.

Producer and supplier groups, for example, rely on us to draft internal control systems (ICS) for them and help with their implementation. These systems are not merely designed to guarantee compliance with required standards, but can also be actively used as quality management instruments.

Is the complete traceability of the flow of goods part of your quality assurance concept?

Please do not hesitate to contact us if you have any questions regarding this.

**Staff training programs.
Internal audits.**

Highly skilled staff are the key to efficiency and sustainable success.

We provide training for inspectors and auditors working for **certification authorities and private standard setting bodies**. We put emphasis on conveying both extensive factual knowledge and good inspection methods.

You can also contact us to perform internal quality assurance audits for you.
